

Transform your users into a **human firewall**

Staff play a critical role and you can do your part by empowering them to block cyber attacks. CIRA Cybersecurity Awareness Training (CAT) gives IT professionals and security teams a cloud-based platform to train users, simulate phishing tactics and measure the results.

44%

of Canadian organizations faced a cyber attack in the past year (2024 CIRA Cybersecurity Survey). IT teams are being more diligent and adding additional layers of security to reduce the risk of cyber incidents affecting their network, devices and data.

60%

of breaches involved a human element (2025 Data Breach Investigations Report). Even if your organization deploys multiple technical layers of security, cyber attackers can use social engineering to exploit your employees.

3X reduction in users clicking on phishing emails after implementing CAT

“

The personalized risk score really caught everyone's attention by providing context. It helps us zero in on high-risk individuals and groups for more focused interventions.

CITY OF FREDERICTON

WHY CAT IS YOUR STRONGEST line of defence

Time-saving automation

- 1 Assigns training and phishing simulations automatically based on user needs and behaviour, including remedial courses
- 2 Dynamically executes phishing tests with content based on an individual's results from past tests
- 3 Empowers employees to report suspected phishes through a button (integrates easily with Outlook 2013 or newer, O365 and GSuite) or by email

Engage and motivate

- 1 Select from a library of English and French-Canadian driven content and phishing assets based on real-life situations or customize for your organizational profile
- 2 Personal risk scores change based on course completion and successful reporting of real and simulated phishing tests
- 3 Gamification training and leader dashboards showcase user and departmental risk scores, which encourages employee involvement

Useful analytics

- 1 Individual risk scores are assigned based on training, simulation and exposure results—all accessed through their personal dashboard
- 2 Unique department scoring includes exposure to cyber attacks that are based on the type of work performed
- 3 Measure user, department and organizational risk against the NIST cybersecurity framework and other organizations

Easily administer

- 1 Truly unified training, simulation and results tracking make administration and reporting simple
- 2 Fully integrated with Office 365, ADFS and SAML-based identity providers for group and user management
- 3 Interactive tool highlights top risk factors by category to help you prioritize IT investment
